## CEO Message:

Hello I am Thamer J Sulaiman, the Chairman of J-Tech for Security Systems

Our establishment started in Jeddah, in 2012 and our goal was to provide the best technology available in the world to meet the demands of our customers So, we focused on working with the best brands in the field of information technology and security systems to ensure the highest levels of security for you at the best prices

We have hire the best technical staff with high expertise to provide a unique experience for our customers

Through my work at The National Commercial Bank for more than 10 years, I have learned that the customer are the capital of any establishment and their satisfaction should be my first priority, so I keep telling my team (the customer, the customer and the customer)

We promise that we will not stop looking for the best for you and expanding our expertise and knowledge in order to provide you with a unique experience as well as the highest levels of systems to confirm of our mission

**CEO**  
Eng. Thamer J. Suliman

## Who we are:

J-Tech is a shortcut to Jenon Tech for Security Systems and it is a Saudi company registered in the Ministry of Commerce and Investment in addition to the Ministry of Interior. The company was established in 2012 and headquartered in Jeddah. We work in the field of Information Technology and Security Systems. J-Tech follows a steady and renewable path in order to be one of the best service providers in Saudi Arabia with its distinct experience and global vision. The company has cadres with distinguished experience and renewable energies that meet the requirements of advanced technology. J-Tech is proud to have a large business in information systems and security systems field as well as a large base of senior customers, companies and government agencies.

## Our vision:

Our vision is to provide the highest standards of security systems for our customers by keeping up with the latest technologies and hiring highly qualified experts.

## Our goal:

- Dealing with the greatest number of customers by enhancing trust between us and them
- Hiring highly qualified professionals with wide expertise to provide a distinct service for our customers
- Keeping up with the latest technology and security systems
- Accuracy of performance and dealing with devices professionally
- Following the quality standards of work

# Our Services

**Attendance and departure systems**

**Access control systems**

**CCTV systems**

**Fire alarm systems**

**Supplying and installing automatic doors**

**Barriers and Security Fenders**

**Designing and installing of wired and wireless networks**

**Metal Detectors systems**

**RFID anti-theft gates**

**Providing consultancy, technical studies and maintenance contracts**

## CCTV Systems

The field of protection technologies and surveillance by cameras is one of the most prevalent fields currently because of its important role in securing and protecting buildings and properties, whether public or private properties. J-Tech uses the latest technology of surveillance and protection despite the many types of cameras, as we chose our partners very carefully to meet the requirements of all customers. Our goal is to provide protection, surveillance and control for the facility and its employees. Therefore, CCTV systems are considered one of the

most important systems of any modern facility

Any owner of a company, factory, administrative or service establishment or even a house must choose from the many different types of cameras that are suitable for his / her own facility so that He / she can provide all the protection and safety factors for the establishment and employees or even their houses and families through the best options, techniques, prices, shapes and sizes suitable for all positions provided by J-Tech

## Access Control Systems

These systems enable you to control entry and exit through doors because the doors can be opened only through fingerprint, access card or facial recognition, not with a normal key. Thus, It will only open for the authorized persons that have the right to pass through it

## Attendance and Departure Systems

J-Tech provides attendance and departure systems with fingerprint, card or password. These systems are used to determine the time of attendance, departure, signature, delay, overtime, absence days, salaries, discounts, monitors and records. Through using these systems, you can avoid falling into many errors and problems of tampering with the disclosure of attendance and departure, which can cause you huge financial burdens. These systems have proved their quality and efficiency in many companies and institutions, especially in government agencies, banks and companies.

## Barriers and Security Fenders

J-Tech provides various products and methods for securing parking entrances. The choice of the appropriate product depends on the customer's desire, the nature of the location and the required degree of protection.

### Barriers

The ideal solution to control entry and exit of vehicles from the parking building or from the parking area. J-Tech offers several options related to the nature of the use, whether at the entrances and exits of the parking building with arms of different lengths that match the width of the track or to reserve a specific private parking.

### Security Fenders

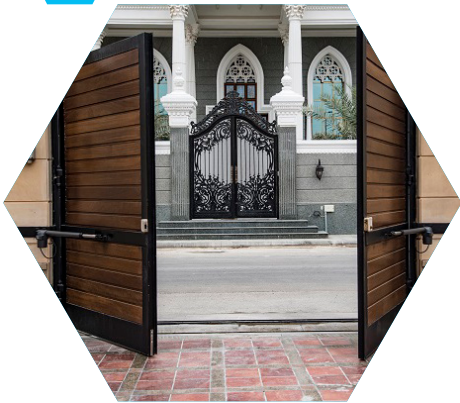

Our products are characterized by the highest level of protection against vehicle threat and prevention of entry of these vehicles through the gates of the facility. Our products include units that are compatible with global standards of collision, industrial units and units of limited use. They are available with different working techniques to ensure their work for long periods without failure. All the products provided by the company can be connected to various control systems and monitored through the central control unit.

## Supplying and installing automatic doors

J-Tech provides many high-quality automatic door products based on the highest quality brands such as Wine Dalton, Lift Master, Somfy, etc J-tech offers a wide variety of automatic doors such as:

1

**Swing Gates**

2

**Roller Grilles  
Doors**

3

**Slates Shutter  
doors**

4

**Metal doors**

5

**Roller doors**

6

**Sliding doors**

## Fire alarm systems

The modern fire alarm systems aim at detecting fire and early response to it, then turning it into a double audio and visual signal to alert the individuals inside the building or in the fire station indicating the early stages of fire. However, fire detectors in general cannot determine the cause of fire or its range and intensity. Therefore, bad types of fire detectors may cause erroneous warnings, which are not due to faulty detection, but due to the poor quality of these types or wrong distribution. Therefore, these fire detectors must be subject to international standards for their design in addition to testing them in modern labs equipped with the latest testing devices and techniques, in addition to the need to adjust the audio signal of the fire detector to be higher than the background volume in the surrounding area where the device is located.

## RFID anti-theft gates

If you have a clothing store and want to prevent thefts inside the store permanently, here is the latest technology of burglar alarms designed and manufactured specifically for clothing shops, where you can use the gates of clothes theft warning. It's a gate installed on the door of the shop, then small devices (called tag) are installed on all clothes in the shop, they are small plastic parts that cannot be removed from clothes without a small device with the cashier only. When the customer pay the cost of what he bought, the tag is removed from the clothes and exit safely from the gate. In case of exit with the tag installed, a very loud alarm will start immediately to alert security or shop staff to stop the thief.

**The RFID anti-theft gate consists of basic components which are:**

1. The gate, which usually consists of, at least, two pieces installed on the sides of the shop door. If the door is large, a third piece is added. The area between each 2 pieces must not exceed 2 meters.
2. The tags which are small pieces made of plastic and fixed on all clothes. These tags have many different shapes and sizes.
3. The tag remover which is the device that is placed at the cashier's office. After completing the payment process, the cashier removes the tag so that the clothes can be taken outside the shop without starting the alarm.

## Metal Detectors systems

Explosives and metal detectors are the most important security and protection devices used to detect explosives and metals of all kinds. These devices are suitable for (Malls, banks, hotels, airports, large companies). Our company has all kinds of these devices, which are doors with powerful sensitivity to detect explosives or metals. They are installed in hotels, banks and malls; they detect metals during passing through them. When there is any kind of metal with the person who passes through it, it triggers a sound alarm. J-Tech provides multiple systems for metal detection such as:

1. GARRETT which is a manual metal detector that works with sound and vibration, it's useful for the frisking process
2. Security gate that operates with lighting and sound alarm system. This gate has thirty-three detection areas, which are shown by the lighting strip on the edges, which facilitates detection and inspection
3. XRAY baggage detector which is commonly used in airports and hotels

## Designing and installing of wired and wireless networks

We design and implement computer networks and Internet. In addition, we manage networks and provide technical support under annual contracts and focus on preventive maintenance to prevent and reduce failures and errors.

### Network Design

The business depends on the infrastructure of the network. Therefore, our goal is to conduct a comprehensive study to know all the objectives and operational and administrative requirements, in order to develop the appropriate designs for the network to ensure the efficiency and speed as well as protecting the network from any imbalances or failures.

## **Network infrastructure**

We have wide experience in building and developing small, medium and large networks (LANs), WANs, wireless networks and VPN technology, relying on qualified personnel and strategic partnerships with specialized international companies

## **Protection system**

Our security plan includes internal and external network monitoring as well as preventive protection for the site, providing all reports to correct security breaches in the network through hacking detection systems, antivirus solutions, etc to avoid all potential problems and guarantee full security

## **Networks Installation**

Networks Installation is a very complex process, as it's not just extending wires and connecting them, as some people think, this unfortunately what makes a lot of people implement their projects through non-specialized companies or individuals. We have high experience in implementing, installing and supporting networks in addition to providing all designs and infrastructure for the network based on our expertise and qualified and specialized staff to implement network projects according to the preliminary study of the project to ensure proper implementation and installation according to international standards and specifications

## **Technical support for networks**

Networks have many sensitive and variable parts, so we provide technical support for the networks in order to avoid any network malfunctions which can disrupt your employees' productivity and effort

## **Network Management**

Network management is a key corporate requirement especially for companies that rely on computer networks as its primary means of communication, collaboration and information exchange to ensure day-to-day business performance and employee productivity

Therefore, we provide a network maintenance plan so as to maintain productivity at its highest levels through system analysis and recommendations for any new technology or improvements for the network through annual maintenance contracts to keep the system constantly updated and functioning properly. In addition to the development of preventive protection programs and updated anti-virus to avoid any defect that may affect the network

## Providing consultancy, technical studies and maintenance contracts

This service aims to conduct studies and provide the necessary consultations for carrying out technical and security projects and identify the needs of companies and their technological requirements as well as participating in developing appropriate operational plans for each institution or company, while continuing to provide support and consultation, even after the implementation, through the maintenance contracts
